## 2. Citations and explanations

**Prior art:** DE19840294A describes a covering device for a mounting recess (roof rack) in a cover strip of a vehicle roof.

Consists of insert part and cover.

The cover is supported in the longitudinal direction of the strip, and the cover has bearing journals at both ends. The bearing journals are supported in bearing shells in the insert part, and the insert also has springs which co-operate with cams on the bearing journals to keep the cover open or closed.

**Problem:** The cover prevents access to the fastening devices in the groove. Mounting of a roof rack is thereby made more difficult.

**Solution:** The journals are attached to a U-shaped bracket. When the cover is open, it is behind the edge of the opening of the mounting recess.

The subject matter of claim 1 therefore satisfies the PCT novelty and inventive step requirements.

The dependent claims likewise satisfy the PCT novelty and inventive step requirements.
